

# Cohesive Data Utility (CDU): Seamless Data Migration and Upgrades for Maximo

## Seamless and Secure Maximo Migration

Upgrading or migrating IBM Maximo systems often brings risks of unplanned downtime and business disruption. Cohesive Data Utility (CDU) solution enables you to overcome these challenges by enabling secure, high-performance Maximo environments that leverage the latest features.

As an IBM-approved global solution, CDU is an ETL toolkit that empowers IBM Maximo customers to eliminate downtime risks by enabling seamless data synchronization and migration across different Maximo environments during the data migration process. It ensures that data is always accurate, consistent, and ready for smooth cutovers, keeping your operations running without interruption.

## Risks Asset-Intensive Organizations Face in Maximo Migrations and Upgrade

**Production  
outages  
during migration**

**Complex synchronization  
across varying  
release levels**

**Limited flexibility for  
testing and training  
on live data**

**Time-intensive  
and labor-heavy  
processes**

# How Cohesive Data Utility Simplifies Migrations

CDU is designed to keep your data migration and upgrade process straightforward, efficient, and disruption-free.

## Zero Downtime Upgrades

- Seamlessly synchronize data changes from production to upgrade environments
- Enable cutovers without interrupting business operations
- Mitigate risks and reduce labor-intensive testing by 60-75%

## Flexible Data Migrations

- Effortlessly move data between environments regardless of version or patch level
- Handle customizations and legacy systems while maintaining data integrity
- Migrate without system outages or data loss

## Merge Environments

- Simplify the merging of multiple Maximo instances into a single environment
- Ensure data accuracy and synchronization throughout the process
- Ideal for consolidating systems after mergers or acquisitions

## Archive Data with Ease

- Migrate historical data to secondary Maximo databases for optimized performance
- Maintain data accessibility for audits and reporting while reducing production load

## Optimized for Business Continuity

- Enables testing and training on live data, reducing operational risks
- Supports offsite updates and continuous synchronization
- Flexible enough to handle complex database vendor changes

## Why Trust Cohesive for Data Migration and Upgrades

**Proven IBM solution across Maximo V4 to MAS**

**Implemented across nuclear, ports, utilities, oil & gas sectors**

**Handles customizations and system complexity with ease**

**Cuts upgrade labor by 75% and ensures smooth, risk-free transitions.**

## Outcomes We have Delivered

### UK Port Upgrade

Migrated a **60GB+** database with zero downtime, used across three upgrade processes

### US Utility

Managed migration for **8,000** users, reducing downtime and improving operational resilience.

### Global Oil & Gas Firm

Synchronized data from **over 30** global sites for a seamless migration experience.
